

Assignment 1
Question 1
Group 6: Akash,
Bruno and Edith

* If review needs to be related back to patron it could be identified with a composite Key formed by patronID and bookID [CK1] (no additional info was stored because only the rate seemed relevant)

bookRating could be retrieved using a composite key formed by bookID and reviewScore [CK2]

* Assignment states both that books can only belong to one category and later that they can be classified in one or many categories. So we chose to use one. In real life this would need to be confirmed before proceeding with the project.
