

Week 6 Class Activity

Revisiting Module 5 (Agile User Requirements & User Stories)

CampusMove: A campus mobility app that helps students coordinate shared rides or shuttle routes based on class schedules and preferences.

Purpose

This short exercise helps you recall and apply Module 5 concepts before we move into Module 6.

You'll analyze, diagnose, and improve sample CampusMove user stories, focusing on:

- The INVEST qualities of strong stories
- Writing clear Acceptance Criteria (AC)
- Understanding the Definition of Done (DoD)

Section 1: Evaluate & Improve User Stories

Instructions:

Each story below represents work for the CampusMove product team.

For each story:

1. Identify any INVEST issues.
2. Review or add Acceptance Criteria (AC) and Definition of Done (DoD) items.
3. If the story is poor, suggest an improved version.

Story 1 (Exemplar – Strong Story)

As a student driver, I want to publish my available ride slots so that passengers can request a seat in advance.

Acceptance Criteria (AC):

- Driver can list available time slots for upcoming days.
- Only verified student accounts can request a seat.
- The system prevents double-booking.

Definition of Done (DoD):

- Code reviewed and merged.
- Functionality tested on both web and mobile versions.
- Documentation and screenshots updated.

Story 2

As a user, I want to use the app to find rides.

Your task:

- Identify its issues
- Rewrite this story to make it specific and testable.
- Then propose one Acceptance Criterion and one DoD item.

Rewritten Story:

.....

Acceptance Criterion:

DoD:

Story 3

As a student passenger, I want to receive a notification when my driver confirms the trip so that I know my ride is booked.

Acceptance Criteria (AC):

- Notification is sent within 2 minutes of driver confirmation.
- Notification includes pickup time and location.
- User can view confirmed rides under “My Trips.”

Definition of Done (DoD):

- Feature tested across devices.
- Notification text reviewed for clarity.
- Privacy and permission settings verified.

How could you make it even more independent or smaller?

.....

Story 4

As a student, I want to plan my full semester transport schedule so that I can manage all my classes and rides easily.

Your task:

- The problem is that this is an epic, not a story as it covers multiple features. Break it into two smaller user stories that are INVEST-compliant.
- List one Acceptance Criterion for each.

Story A:

AC:

Story B:

AC:

Story 5

As an admin, I want to analyze trip patterns using the location data so that I can optimize shuttle capacity.

Question:

Would this be a User Story or a Spike? Why?

.....

If it's a Spike, describe what the expected outcome should be:

.....

Section 2: Acceptance Criteria vs. Definition of Done

Label each as AC (Acceptance Criterion) or DoD (Definition of Done).

Then explain briefly why.

Statement	Label	Why?
The driver can cancel a ride before pickup time.		
Code reviewed and merged into main branch.		
App passes automated test suite.		
The student receives a confirmation email after joining a ride.		
Feature documented in user guide.		

CampusMove Team Liftoff: Building an Agile Foundation

We worked on and reviewed CampusMove user stories and learned how to define value through clear requirements, acceptance criteria, and a Definition of Done (DoD).

Now, you are taking the next step: imagining your CampusMove team at its launch moment; a Team Liftoff.

You'll define your team's shared mission, vision, values, and collaboration agreements before your "first sprint" begins.

Scenario

You are part of an Agile team responsible for designing and launching the CampusMove platform; an app that helps students coordinate shared rides or shuttle routes based on their class schedules and preferences.

Your product idea is clear from last week's work, but now your team needs to formally define how you'll work together.

This "Liftoff" will clarify:

- What success means for your team
- How you'll collaborate effectively
- How you'll make decisions and resolve conflicts
- What "done" really means at the team level

Step 1: Team Mission and Vision (15 minutes)

Task:

As a team, write a short Mission Statement and Vision Statement for CampusMove.

- Mission: What are you trying to achieve for your users?
(Example: "To simplify campus commuting by connecting students for reliable, low-cost rides.")
- Vision: What would success look like if CampusMove truly worked well?
(Example: "Every student can find a safe and sustainable ride to campus within 10 minutes.")

Be concise; 1–2 sentences each.

Post your team's mission and vision in your group's class discussion thread once complete.

Step 2: Defining Team Success (15 minutes)

Task:

Think about what success means for your team, not only for the product, but for how you'll work together.

As a group, discuss and agree on the relative importance of these four dimensions:

1. Customer Value – How useful the app is to its users
2. Technical Quality – How reliable, secure, and well-built the system is
3. Delivery Speed – How quickly you can deliver usable increments
4. Team Learning & Growth – How much your team improves and enjoys the process

Rank them in order of importance for your CampusMove project and be ready to justify your reasoning.

(You may visualize this on paper or online tools if available.)

Step 3: Team Working Agreements (20 minutes)

Task:

Develop a short list of Working Agreements, shared rules for how your team will operate.

These should be practical and realistic. Aim for 5–6 key agreements.

Your working agreements should reflect your CampusMove context and the Agile principles discussed in class (transparency, collaboration, inspection, and adaptation).

Step 4: Team Definition of Done (10 minutes)

Revisit what you learned last week about the Definition of Done (DoD).

Now, apply it at the team level.

Your Team DoD should specify what must be true for any story or increment to be considered done across your whole team.

List 4–6 items that will serve as your Team DoD checklist.

Step 5: Team Charter Summary (10 minutes)

Combine your work from Steps 1–4 into a concise Team Charter for your CampusMove team.

Your charter should include:

1. Mission & Vision
2. Success Priorities
3. Working Agreements
4. Team Definition of Done

This charter represents your team's shared identity and operating model.

Post your final charter (or a photo/screenshot of it) in your class discussion thread titled:

"[Team Name] Liftoff Charter"

Reflection Questions

- Which part of the Liftoff process felt most important for your team's future success?
- How does having a shared Definition of Done help teams maintain quality?
- If you were launching a real project, what part of your charter would you revisit most often?

Thanks,
Omid
